Laporan Pembelajaran Mesin
Semester Genap Tahun Akademik 2017-2018
Tugas 3: *Q - Learning*

Raden Muhammad Imam
1301154106
IF-39-08

April 26, 2018

Q - Learning merupakan salah satu metode pembelajaran yang ada di dalam pembelajaran mesin. Teknik ini tidak membutuhkan model lingkungan. Pada Q - *Learning* diberikan hukum alam yaitu jika melakukan sebuah aksi maka akan mendapatkan reward atau punishment. Komponen dalam *Q - Learning* ada empat yaitu *player, state, actions,* dan *reward*. Ketika seorang player menentukan akan kearah mana dia bergerak. Probabilitasnya dapat di hitung dengan menggunakan rumus

$$Q(state, action) = R(state, action) + Gamma * Max[Q(next\ state, all\ actions)]$$

Setelah di dapat Q yang paling baik, maka aksi dari *learner* selanjutnya akan mengikuti hasil sebelumnya. Pada rumus terdapat gamma yang berupa sebuah konstanta agar tidak *stuck* di suatu titik saja. Inti dari *Q - Learning* adalah agar *player* dapat menuju ke *final state* dengan skor tertinggi. *Player* berhenti jika skor yang di dapatkan telah konvergen alias skornya sudah tidak berubah lagi.

Masalah yang ada pada tugas ini, membangun aplikasi yang dapat belajar sendiri. Aplikasi tersebut merupakan sebuah *grid* dengan ukuran 10x10 dimana inisial *state* berada pada pojok kiri bawah dan *final state* nya berada pada pojok kanan atas atau dapat dilihat pada gambar berikut

10	-1	-3	-5	-1	-3	-3	-5	-5	-1	100
9	-2	-1	-1	-4	-2	-5	-3	-5	-5	-5
8	-3	-4	-4	-1	-3	-5	-5	-4	-3	-5
7	-3	-5	-2	-5	-1	-4	-5	-1	-3	-4
6	-4	-3	-3	-2	-1	-1	-1	-4	-3	-4
5	-4	-2	-5	-2	-4	-5	-1	-2	-2	-4
4	-4	-3	-2	-3	-1	-3	-4	-3	-1	-3
3	-4	-2	-5	-4	-1	-4	-5	-5	-2	-4
2	-2	-1	-1	-4	-1	-3	-5	-1	-4	-1
1	-5	-3	-1	-2	-4	-3	-5	-2	-2	-2
	1	2	3	4	5	6	7	8	9	10

Design Program pada masalah ini terdiri dari dua buah file, yaitu world.py dan learner.py

1. world.py merupakan file python untuk membuat *grid-grid. Source code* dapat dilihat sebagai berikut:

```
